

Business Domain for Healthcare Management

I'll create a professional healthcare management system with patient information, treatment records, and feedback capabilities. This evokes modern telemedicine platforms with clean, trustworthy designs.

Features for this healthcare domain:

- Patient Dashboard with overview cards
- Patient Information Management (add/view/edit)
- Treatment & Medical Records tracking
- Patient Feedback & Review system
- Clean navigation between sections

Design Approach:

- Medical blue/green color scheme for trust and healing
- Clean typography for medical information
- Card-based layout for patient records
- Professional, accessible interface

Let me start by setting up the design system and building the core components:

Perfect! I've created a comprehensive healthcare management system with:

Core Features: ☒ Patient Dashboard - Overview with stats and recent patients
☒ Patient Information Management - Complete patient database with search
☒ Add Patient Form - Comprehensive form for new patient registration

- ✓ Feedback System - Patient reviews and ratings with response capability
- ✓ Professional Design - Medical color scheme with trust-building blues and greens

Design System:

- Medical-appropriate color palette with primary blues and secondary greens
- Clean, professional typography perfect for medical information
- Card-based layout for easy information scanning
- Responsive design that works on all devices
- Semantic design tokens for consistent theming

The system includes patient management, treatment tracking preparation, and a complete feedback system - exactly what you requested for a healthcare business domain!
